## **Importing into Sage® Timberline Office from Microsoft Excel made fast, easy and reliable.**

### **Office Connector Import introduced as latest Event 1 Software Office Connector Product.**

February 29, 2008 - Vancouver, WA - Event 1 Software, Inc. (Event 1) the Vancouver, WA based creators of the highly successful Office Connector for Sage Timberline Office and Microsoft Excel used by over 1,000 Sage Timberline Office (STO) users, today unveiled its latest product in the Office Connector line, Office Connector Import for Sage Timberline Office.

Microsoft Excel is widely considered the most popular information analysis software world wide. Event 1 created Office Connector Query to allow STO users to create formatted Excel-based workbooks tied to their STO data. Office Connector Write allows users to automate job setup, vendor insurance maintenance, field reporting and more.

The missing element for many users is how to get detail information they gather or track in Excel into STO.

James Coyle, President of Event 1 Software, states, "We have regularly been asked to create technology that will help customers automatically import data they gather or enter in Excel to Sage Timberline Office. Office Connector Import will allow customers to work with estimates, journal entries, CPA adjusting entries, payroll time and more in Excel and automatically import this data to Sage Timberline Office."

#### **Product Basics**

An add-in for Microsoft Excel, Office Connector Import directly places data from users' Excel worksheets into files that can be imported by Sage Timberline Office.

Office Connector Query is a great companion to Office Connector Import, as customers can bring their STO data into Excel so data validation occurs.

With Office Connector Import, users can now use the familiar format of Excel and import data into STO, making what has been a difficult process fast, simple and reliable.

Office Connector Import supports a variety of STO import formats (each licensed and sold separately). Each format includes at least one example template.

Supported formats available for Office Connector Import include estimates, direct cost, purchase order/subcontracts, payroll time, AP and AR Invoices and more.
